

# Minutes openMDM GA 24.11.2021

Attendees:

- Angelika Wittek
- Ulrich Bleicher
- Hans-Jörg Kremer
- Michael Plagge
- Gert Sablon
- Stefan Wartini

Agenda

1. Current status of the members
2. Completion of the program plan
3. Budget 2022
4. Contracts for the product manager and developers for 2021 from the 2021 budgets

## Current Status of Members

Uli: openMDM is used in several projects at BMW and is up and running.

Gert and Stefan: Main topic: openMDM as ASAM ODS companion standard

Hans-Dirk: openMDM successfully used in EXOKNOX, also openMDM as ASAM ODS companion standard

Hans-Jörg: Data management is increasingly important for tests and simulation; currently mainly contributions by BMW and MTU documented by numerous tickets.

Michael asked whether and how openMDM might contribute to Catena-X.

Hans-Jörg proposes to open openMDM for other types of data. Therefore, it might be worth to consider a new name for the working group: Data Management for Automotive (e.g., scenarios, measurement data, simulation data) - but where are the boundaries?

## Completion of the program plan

See attached slides

Michael asked the working group to pay attention on the license of ASAM if openMDM will become a new ASAM standard. Current state: special agreement between Eclipse and ASAM regarding the usage of CORBA IDL files.

## Budget 2022

Budget see slides.

RESOLVED, the Steering Committee approves the budget for 2022 as presented.

**Contracts for the product manager and developers for 2021 from the 2021 budgets**

SC approves that the remaining budget for 2021 will be used for services by Angelika and developer hours. Angelika will propose to Uli how the remaining budget should be split up for toolkit manager and development tasks. Uli will check the reported hours.
