

Eclipse Ditto

Digital Twins for Eclipse IoT

new project introduction

who are we?

project leads

Gerald Glocker

Thomas Jaeckle

Committers

Daniel Bohn

Daniel Fesenmeyer

Dominik Guggemos

Gerald Glocker

Johannes Kraeher

Jurgen Fickel

Thomas Jaeckle

Yufei Cai

our profession

DevOps'ing a cloud service @boschsi

foundation for Eclipse Ditto

distributed + highly scalable

on active codebase since > 2.5 years

battle proven

we are eager to work on OpenSource

Digital Twins

a mechanism for simplifying IoT
solution development

Digital Twin metaphor

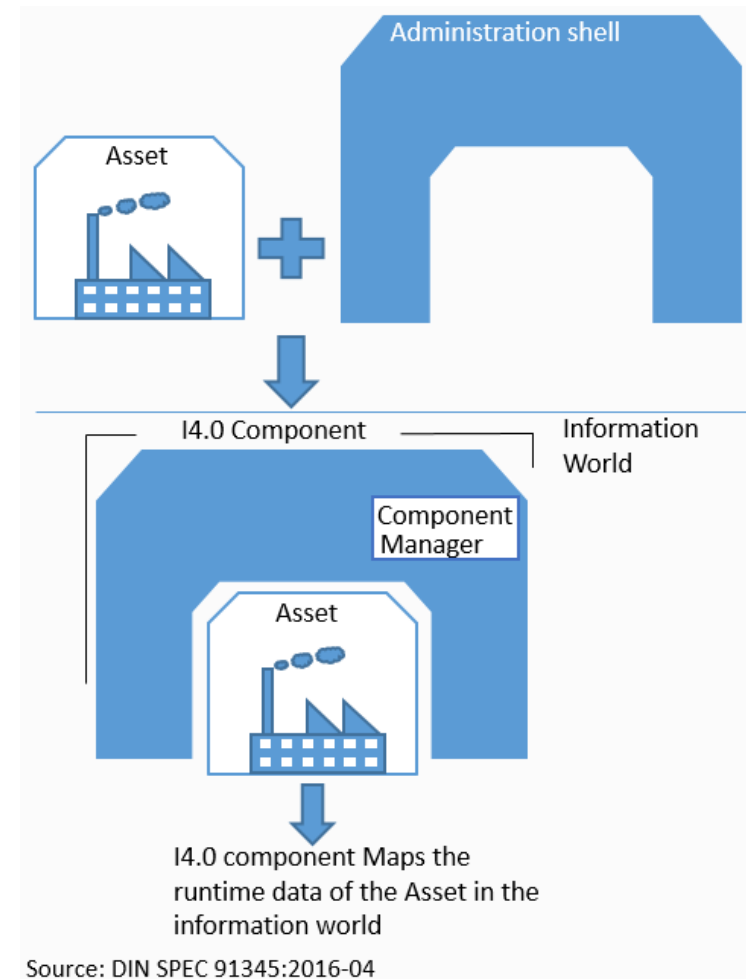

- mirrors physical devices
- provider of aspects+services around devices
- keep real and digital worlds in sync
- industrial and consumer-centric IoT scenarios

in IIoT / Industry 4.0

→ asset administration shell
("Verwaltungsschale")

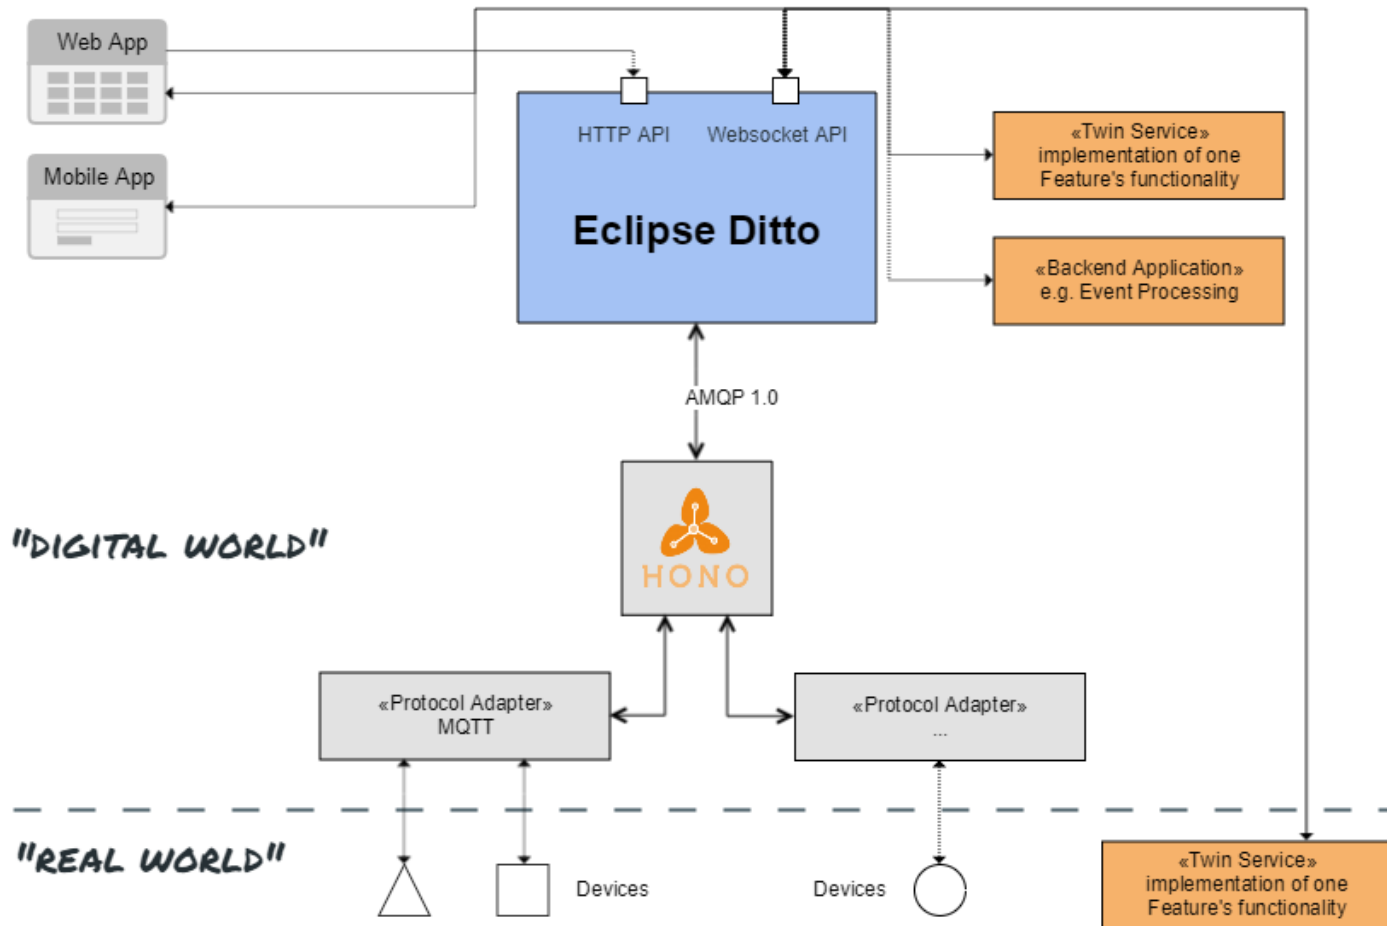

→ holistic view of all
capabilities (services) and
aspects of an asset

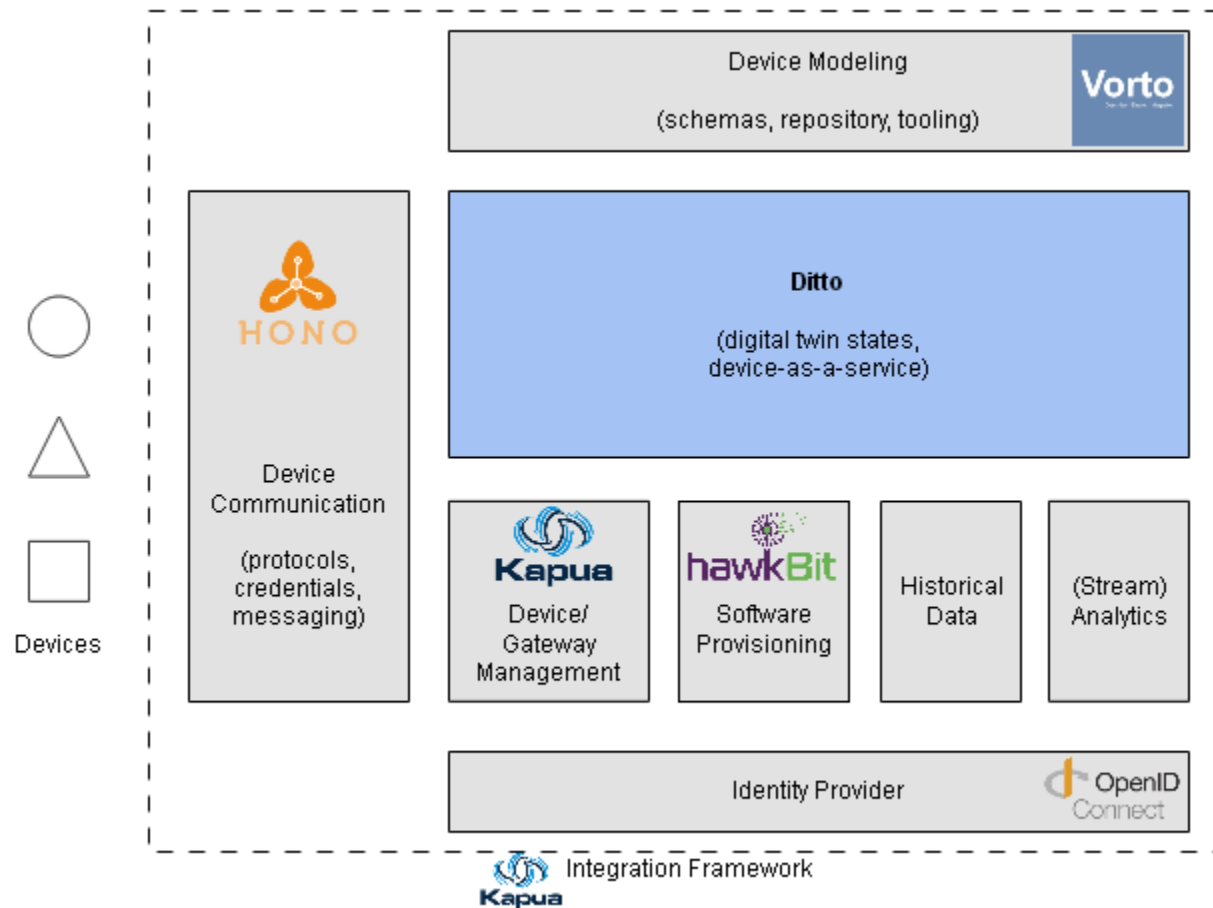

Eclipse Ditto

... where IoT devices and their
digital twins get together

context

in context of Eclipse IoT

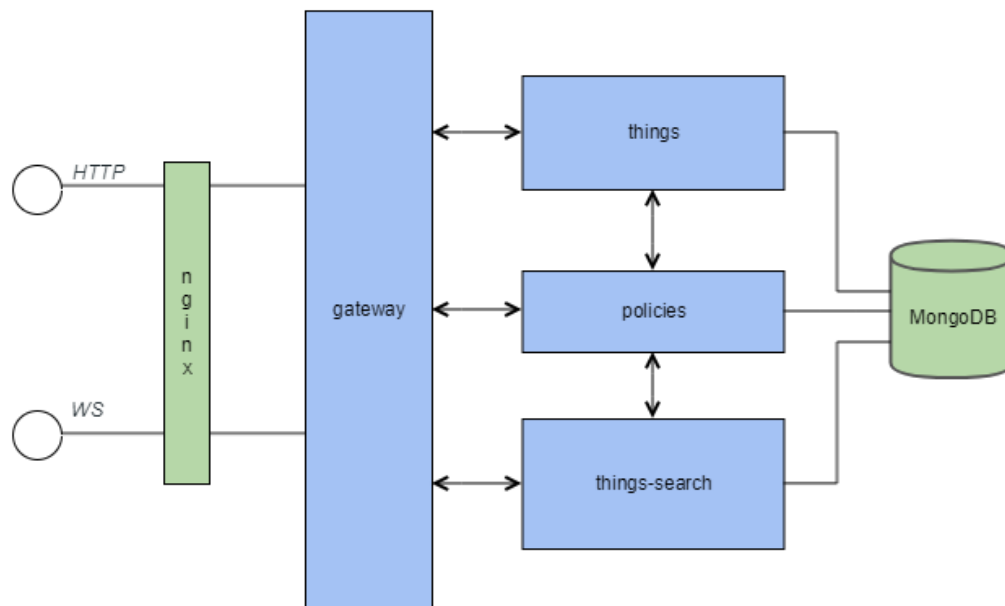

Contribution

what is initially contributed and
what comes next?

initial contribution

→ domain model,
commands, events,
protocol-adapter

→ Java based
microservices bundled
as Docker containers

→ dependency to
MongoDB

what comes next?

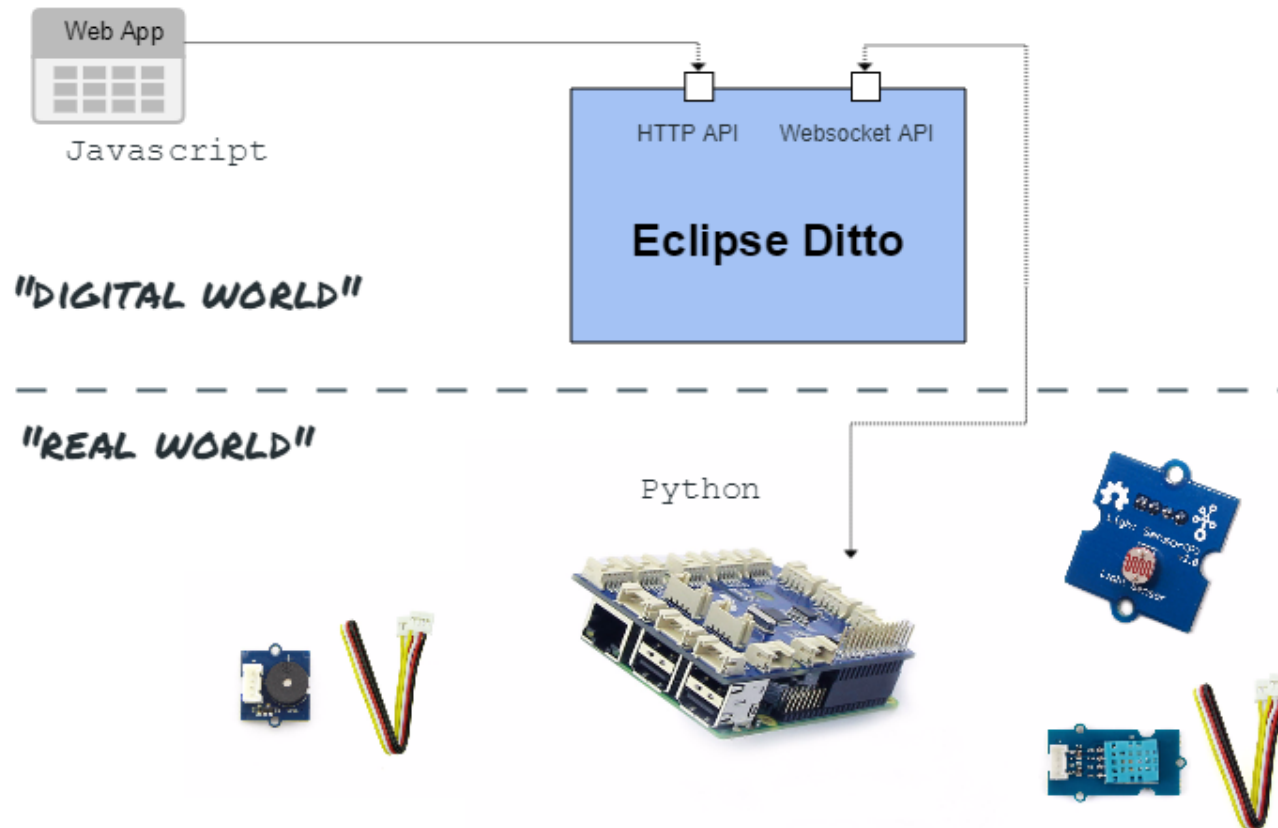

- milestone release
- documentation + examples
- project site + logo
- optional integration of **Eclipse Vorto** for validation
- **Eclipse Hono** "bridge" for receiving device telemetry

A close-up, shallow depth-of-field photograph of a bicycle's rear cassette and chain. The bicycle frame is red, and the chain is silver. The background is blurred, showing more of the bike and a light-colored wall.

Demo time!

may the demo gods be with us

setup

Hardware

- seed studio
- GrovePi+
- Buzzer
- Light Sensor
- Temp&Humidity Sensor

Thank you
